SUMMARY

Dynamic Full Stack Developer with 5 years of experience creating and optimizing web applications using React, TypeScript, and Firebase. Proficient in leveraging AI coding assistants and agentic workflows to accelerate development, automate refactoring, and optimize system logic. Spearheaded the development of a Notification Log feature, enhancing real-time user interaction and system transparency. Seeking new challenges to leverage skills in building scalable, maintainable applications through frameworks, cloud technologies, and modern AI-driven engineering practices.

EXPERIENCE

Full Stack Developer

ServiceCore

June 2024 - June 2025

- Accelerated the end-to-end delivery of a comprehensive Notification Log feature (React, Node.js, Firebase) by leveraging Cursor and agentic coding workflows to rapidly prototype, write boilerplate, and implement real-time client communication tracking.
- Utilized AI-driven code analysis to refactor legacy Firebase Cloud Functions, drastically reducing redundancy and optimizing backend performance and maintainability.
- Streamlined a major technical debt initiative by executing agent-assisted migrations of legacy class-based React components into modern functional components with hooks, ensuring strict type-safety and improved testability.
- Deployed AI pair-programming techniques to intelligently generate and strengthen Jest test suites with robust mocking, significantly minimizing flakiness in critical local development and Docker workflows.
- Built accessible, responsive UI components and collaborated with UI/UX teams in Figma to translate prototypes into production-ready interfaces.
- Used Docker for consistent local development and strengthened Jest test suites with mocking to reduce flakiness in critical workflows.
- Leveraged Cursor and AI-assisted workflows to accelerate refactoring and feature implementation, significantly reducing development cycles.

Full Stack Developer (Contract)

Healthworx

January 2024 - March 2024

- Built core MVP flows for a healthcare job-referral platform using Vue, Nuxt, and Tailwind, including job posting, editing, and applicant submission features.
- Developed responsive UI components and implemented consistent Tailwind theming based on UI/UX team designs.
- Contributed to Supabase schema design and implemented authentication, PostgreSQL queries, and real-time features.
- Collaborated with a C-level stakeholder and designers to translate product requirements into functional, testable UI workflows.

Front End Developer (Contract)

Cloudwell

January 2023 - January 2024

- Built responsive UI components using React, Fluent UI, HTML, and CSS.
- Integrated frontend features with C-based backend APIs to deliver dynamic, data-driven interfaces.
- Collaborated with backend and QA teams to ensure smooth API integration and reliable user workflows.
- Contributed to frontend development workflows within Azure-hosted environments.

Full Stack Developer

Ondema

June 2021 - October 2022

- Built interactive UI components and workflow views using React and Redux, including the 'My Work' view for displaying user-specific tasks.
- Implemented Task creation, editing, deletion, completion, and "start work" flows backed by AWS Lambda, AppSync/GraphQL, and serverless infrastructure.
- Designed and implemented role-based authorization to separate authentication from authorization, enabling secure multi-tenant access across environments.
- Contributed to the integration of Apache Kafka for streaming task and workflow events, improving system responsiveness and event traceability.
- Improved test reliability by enhancing Cypress E2E suites and Jest unit tests to cover critical task and workflow logic.
- Modernized legacy ES5 class-based React components by converting them into ES6 functional components with hooks, improving readability, performance, and maintainability.

PROJECTS

Portfolio

anthony-bologna-portfolio.vercel.app/

- Designed and built a personal portfolio with Next.js, TypeScript, and Tailwind CSS, deployed on Vercel with clean routing, responsive layout, and a multi-theme UI system using CSS custom properties.
- Implemented interactive front-end features including animated page transitions, an image carousel with touch/swipe support, and embedded project demos to showcase state management and UI development skills.
- Curated and presented full-stack projects with detailed case-style descriptions and live links to production apps built with React, Next.js, Supabase, and modern tooling, highlighting both user experience and developer experience.

MyExercise

my-exercise-tracking-app.vercel.app/

- Built and deployed a full-stack fitness PWA with Next.js 16, React 19, TypeScript, and Tailwind CSS, giving users an installable, mobile-first workout experience in the browser without an app store.
- Designed a complex personalized weekly plan engine utilizing agentic prompt engineering and Cursor to map out deterministic logic for materializing training variations from a 200+ exercise catalog based on user equipment and expertise levels.
- Maintained a high-velocity development cycle by deploying automated AI coding agents to write comprehensive test coverage, resulting in 70+ Vitest test files that successfully validate complex session integrity and regen edge cases.

Potluck

tony-baloney-potluck.vercel.app/

- Architected a full-stack event planning application utilizing Cursor's multi-file editing capabilities to rapidly scaffold a synchronized frontend and backend architecture featuring Supabase Auth, PostgreSQL, and Redux Toolkit.
- Leveraged AI coding workflows to efficiently integrate complex third-party services, including Leaflet map discovery, Geoapify geocoding, and strict Zod schema validation, while adhering to WCAG 2.1 AA accessibility standards.

EDUCATION

General Studies

Southern CT State University · New Haven, CT

Certification Full Stack Development

App Academy · San Francisco, CA · 2021

An intensive 16 week course teaching full stack development with Ruby, Ruby on Rails, Javascript, Node, HTML, CSS, React, MongoDB, SQL, and Postgres.

SKILLS

Frontend: React, CSS, TypeScript, Redux, Vue.js, Tailwind CSS, HTML, Fluent UI, Javascript, Zustand

Backend: Node.js, Firebase, Firestore, Azure, AWS, Kafka, DynamoDB, Lambda, AppSync, GraphQL, PostgreSQL

Testing: Jest, Cypress, React Testing Library, Vitest

DevOps: Docker
